

Use of Technology in Instruction

The board supports the use of technology in the delivery of the education program and encourages employees to investigate economical and innovative ways to utilize multi-media, computers, and other technologies as a part of instruction.

It is the responsibility of the superintendent or designee to develop a plan for the use of technology in the curriculum and to evaluate that plan annually. The superintendent will report the results of the evaluation and make a recommendation to the board annually regarding the use of technology in the curriculum.
